☎ : +919964113855

encompass the sales, planning, preparation and execution of the distribution of doordrop media (unaddressed mail) to households in the UK or, in some cases, outside of the UK. The DDM processes start with a request for the distribution of doordrops, which can be entered into the system as a quotation. If the quotation is accepted by the customer, a contract is created with one or more briefs, and the exact regions and sectors where the doordrops are to be distributed need to be entered into the system (the schedule). The contract is confirmed by the customer; then, based on the information in the contract and briefs, the system generates instructions for the logistics process, to ensure that the doordrops are transported from the location where they are printed in the correct quantities to the distributors. The system also generates instructions for the distributors to actually distribute the doordrops.

Doorway R1.0 application is divided into functional sub modules such as Sale, Order, Operation, Distributor, Geography, Report, AddressBook, users and Interface.

Accountabilities:

Writing business logic for some of the business requirements
Writing Unit test code
Bug fixing across module.
Interacting with the On Shore for clarification of requirements and issues
Implementing RFC
